PROFESSIONAL SUMMARY

Software Developer with hands-on experience in production support, web application development, and system enhancements using React, PHP, JavaScript, and MySQL. Experienced in resolving L1–L3 technical issues across frontend, backend, and database layers, optimizing SQL queries, integrating REST APIs, and implementing security-focused workflow enhancements. Collaborates with development teams to build internal systems and deliver change requests based on business requirements. Currently expanding expertise in C#, .NET, cloud engineering, and AWS.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, C#, PHP, HTML, CSS
Libraries & Frameworks: React, Node.js, Express.js, ASP.NET Core, FastAPI, Tailwind CSS
AI / ML: Scikit-learn, Pandas, NumPy, SciPy, Statsmodels, Google Gemini, Ollama, AWS Textract
Cloud & DevOps: AWS, Docker, GitHub Actions, Terraform
Database: Firebase, MySQL, Postgresql, Redis
Tools & APIs: GitHub, Docker, Postman, DBeaver
Deployment: Vercel, Railway

EDUCATION

Bachelor of Computer Science (Intelligent Systems)
Universiti Pertahanan Nasional Malaysia (UPNM) | 2021 - 2024 | CGPA: 3.43

Foundation in Engineering and Technology
Universiti Pertahanan Nasional Malaysia (UPNM) | 2020 - 2021 | CGPA: 3.50

WORK EXPERIENCE

Software Developer
Datascience Sdn Bhd | Feb 2026 - Present

- Managed and resolved technical tickets (L1–L3) for Financial Management Systems used by Universiti Utara Malaysia, Tourism Malaysia, and Majlis Agama Islam dan Adat Istiadat Melayu Perlis (MAIPs).
- Debugged and resolved issues across frontend, backend, and database layers in production environments (PHP, Javascript, MYSQL, Dbeaver).
- Collaborated with a development team to design and develop an internal Ticket Management System, contributing to both frontend and backend development using React, JavaScript, Tailwind CSS, Axios, React Query, and Node.js, integrated with REST APIs.
- Performed database investigation and SQL query optimization to improve system performance.
- Implemented POS Digital Certification for approval workflows to enhance security and compliance.
- Contributed to the development and implementation of change requests for the addition of SKBBK functionality, including system enhancements, API integration, and updates to existing workflows.

IT Support Assistant (Protege)
SY Trisilco Sdn Bhd | Mar 2025 - Jan 2026

- Performed IP patching and updated microwave link network configurations for YTL Communications (YES).
- Upgraded existing microwave links by migrating connections from microwave to fiber infrastructure.
- Installed and configured Ceragon IP-10 IDUs, including IP address configuration, for new fiber sites.
- Maintained Excel macros and contributed to the development of internal automation systems using Power BI.
- Assisted with microwave backhaul operations and supported the decommissioning of legacy microwave links.

PROJECTS

Quantify — Stock Portfolio Analytics Dashboard

(React, TypeScript, FastAPI, SQLAlchemy, scikit-learn / statsmodels, PostgreSQL, Docker)

- Built a full-stack Bursa/US portfolio platform (React + FastAPI) that turns a trade ledger into research-ready market data: prices, FX, factors, events, IV, and headlines for downstream models.
- Designed a multi-agent forecasting orchestrator: specialist models (ridge technical ranks, HAR volatility, factor-based quant, event-driven signals, drawdown probability) validated and scored out of sample, with an append-only live forecast record at month end.
- Implemented the ML/stats stack in Python (numpy, scikit-learn, statsmodels): walk-forward training, Newey–West inference, block-bootstrap intervals, and Brier/IC scoreboards so agent skill is measured, not asserted.
- Added quantitative research surfaces (FF5 + momentum, costed momentum backtests, FOMC/CPI/earnings event study, Black–Scholes IV surface) as features and evaluation data for the agents not a black-box chat bot.
- Migrated the API to FastAPI/SQLAlchemy for a Python-native ML path (same Postgres, golden-fixture + live JSON parity), with scheduled sync that feeds agents (prices, IV recorder, headline capture).

GitHub: https://github.com/Trixxy98/Quantify

TaskFlow - SaaS Task Management App

(React, Node.js, Tailwind CSS, Express, MySQL, Gemini, Stripe)

- Built a full-stack task management application using React, Vite, Node.js, Express, and MySQL.
- Developed core productivity features including task CRUD, priority management, due-date tracking, Kanban board, calendar view, and advanced search.
- Implemented Stripe Checkout, Customer Portal, and webhook-driven subscription billing to upgrade users to Pro (AI chatbot, notes, analytics, attachments).

GitHub: https://github.com/Trixxy98/TaskFlow-API

Ticket Management System – Internal Company Project

(ReactJS,Tailwind CSS, Node.js, Express, REST API, Prisma, MySQL, EC2, PM2)

- Built an internal help-desk platform for tracking, assigning, and resolving technical support tickets across agent and customer workflows.
- Developed React interfaces with Tailwind CSS, Axios, and React Query for ticket queues, filtering, status updates, assignment, replies, and role-based routing (agent app vs customer portal).
- Implemented REST APIs in Node.js/Express with Prisma and MySQL for authentication (httpOnly session cookies), ticket processing, and role-based data access.
- Deployed the application to an Ubuntu EC2 server using Nginx (static frontend + /api reverse proxy), PM2 for the Node process, and GitHub Actions with SSH/rsync for automated builds and releases.

ACTIVITIES & LEADERSHIP

- Exco, UPNM Mobile Game Tournament (2020)
- Volunteer, Misi Bantuan Banjir UPNM KL (2021)
- Participant, MOHE-MDEC Global Outsourcing Talent Bootcamp (2024)
- Participant, Town Hall Keselamatan Negara 2.0: Ancaman Jenayah Siber (2023)
- Volunteer, Gotong-Royong @ SK Cheras Jaya (2023)
- Demonstrator, Robotics Program @ SMK Seri Mulia (2023)
- Demonstrator, SULAM Program @ SK Bandar Tun Razak 1 (2023)

LANGUAGES

- English (Fluent)
- Malay (Native)
- Mandarin (Basic)
